Holliday Thomas

Software QA Engineer at InnovA Technologies
Fort Worth, Texas, United States

Summary

I am an accomplished Software Development Engineer in Test (SDET) with 4+ years of experience designing, developing, and executing automated testing frameworks. Proficient in building robust Playwright-based solutions, automating APIs, and seamlessly integrating tests into CI/CD pipelines, I thrive on enhancing software quality and delivery efficiency.

My skill set spans page object modeling, pipeline development (particularly in Azure DevOps), and effective collaboration with cross-functional teams. I enjoy finding creative ways to improve or streamline existing processes, often leveraging automation to increase productivity and free up valuable development time.

I bring strong analytical abilities, a commitment to ongoing learning, and a passion for fostering team growth. Above all, I'm eager to leverage my development and testing expertise to drive product quality and deliver meaningful results.

Experience

InnovA Technologies

SDET / QA Automation Engineer at Innova Technologies

September 2021 - Present (4 years 3 months)

Fort Worth, Texas, United States

I design, develop, and maintain robust automated testing frameworks to streamline quality assurance across web and mobile platforms. By combining both front-end and back-end evaluation tools, I identify and resolve critical defects early—enhancing overall productivity and workflow efficiency. I also enjoy collaborating closely with developers and stakeholders in grooming, planning, and daily standups to ensure smooth sprint execution and hit key deliverables.

Playwright-Based Automation

I built a scalable Playwright framework that supports parallel test execution and integrates seamlessly into our CI/CD pipelines, significantly reducing regression testing times.

API Testing & Reliability

I automated REST API workflows using Postman and incorporated the results into Azure DevOps pipelines, ensuring consistent performance and clear reporting to upper management after Smoke or End-to-End test runs.

Efficient Test Coverage

I implemented automated systems to reduce manual redundancy, boosting testing efficiency by 40%. I also author detailed test plans, test cases, and documentation at the start of each sprint, guiding the creation of up to 20 scripts.

Cross-Functional Collaboration

I recommend solutions for software bugs to accelerate program completion, train team members in automation tools and best practices, and deliver data-driven insights—complete with visualized test paths and productivity metrics—after each sprint.

Leadership & Agile Practices

I stepped in as QA Lead during a teammate's absence, developing agendas, schedules, and overseeing day-to-day testing activities. I remain actively involved in grooming, planning, and daily Scrums to align testing efforts with development goals.

Archer Software

Software QA Engineer

August 2019 - September 2021 (2 years 2 months)

Dallas, Texas, United States

- Perform testing on mobile (iOS, Android) and web applications using various testing tools.
- Create test cases based on business requirements using TestRail.
- Track and report defects in Jira.
- Conduct compatibility testing on various platforms and devices.
- Develop and execute SQL queries/procedures for data validation in the database.
- Collaborate closely with software development and project management teams for effective testing procedures.

MultiCam, Inc.

Field Services Engineer

April 2016 - August 2019 (3 years 5 months)

Dallas, Texas, United States

- Set up and maintained machinery and equipment, including Router, Plasma, Laser, and Waterjet machines.
- Interpreted schematics, blueprints, and work instructions to determine product specifications and machine requirements.
- Conducted machinery maintenance and replacement of worn components.
- Contributed to continuous improvement and problem-solving activities.
- Coordinated with manufacturers for complex equipment repair.

DIRECTV

Field Service Technician

September 2013 - April 2016 (2 years 8 months)

Fort Myers, Florida, United States

- Installed and programmed equipment.
- Diagnosed, repaired, replaced, and upgraded components.
- Maintained accurate installation, service, and inventory records.
- Provided outstanding customer service, troubleshooting, and issue resolution.
- Educated customers with clear and concise information
- Actively engaged in ongoing technical training and professional development.

Education

ITT Technical Institute-Fort Myers

· (2013 - 2015)
